MOTIONCODE Programming

C Programming for Dunkermotoren drive electronics

- Execute sequence programs directly on the motor

- Access to all parameters and functions of the motor

- Programming in C

- Basic functional template allows for quick and easy programming

- **DA5** Integration into Drive Assistant 5

Decentralization as a finished concept!

Use our new programming environment to create MotionCode for *dPro* and *dMove* motors using our new programming structure, downloaded directly to the motors. MotionCode can be programmed easily in C and can be extended to the entire functional range. There are no limits for your ideas for independently acting motors in decentralized software architectures.

You do not want to program by yourself?

No problem, as a service, we are happy to offer the development and programming of your custom logic.
