

Healthcare and Laboratory

Your motor solution for a healthy future

Patient care has always been the primary responsibility of medical facilities.

The increased number of patients and rising competition for medical services as a luxury product demands efficient and comfortable equipment that meets the latest technological standards.

Whether CT or X-Ray machines, laboratory equipment or dialysis pumps, operating tables or rehabilitation equipment, medical applications must be precise, reliable, and quiet.

The best machines can also be mobile enough to be used in any treatment room. Since failures can delay vital procedures, possible malfunctions must be reliable predicted or avoided altogether.

Our maintenance-free brushless DC motors and high-precision modular solutions meet the highest standards.

With nexofox, we set new guidelines for networked applications in medical technology (Internet of Medical Things – IoMT).

Why we offer the perfect drive solution

Long service life and high cycle rates

Low-noise motors and gear units

Optional integrated control electronics and bus interface

Innovative, energy-efficient DC concepts (IE 5)

Maintenance-free over the entire service life

Long product availability

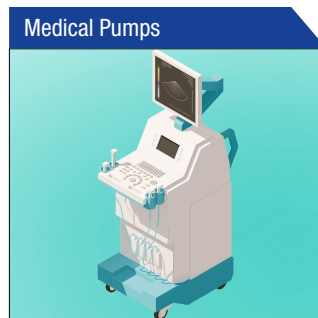

” Better together

- » High-quality and customer-specific solutions – also in small batches
- » With our modular system, we offer around 25 million different drive options – from small 30 mm pump drives to multi-axis gantry systems
- » We can integrate our solutions with third-party products – Find your system partner in us
- » Don't be shy about IoMT – Our nexofox team will be happy to advise you
- » Patient and medical staff are our priority – the best comfort for everyone involved

” Our drives in use
